

## Methoxsalen

Revised: June 15, 2024.

CASRN: 298-81-7

## Drug Levels and Effects

### Summary of Use during Lactation

No information is available on the use of methoxsalen during breastfeeding. Expert opinion indicates that due to the photosensitizing effects of methoxsalen, breastfeeding should be withheld for 24 hours after an oral dose to allow for 95% of the drug to be eliminated in the mother's urine.[1,2] The same precaution probably applies to patients receiving methoxsalen as a part of therapy for cutaneous T-cell lymphoma. Use of topical methoxsalen is not contraindicated during breastfeeding, but avoid direct contact of the treated skin with the skin of the infant. [3,4]
