

## Clotrimazole

Revised: September 19, 2022.

CASRN: 23593-75-1

## Drug Levels and Effects

### Summary of Use during Lactation

Because has poor absorption from the skin and vagina and has poor oral bioavailability, it is unlikely to adversely affect the breastfed infant, including after topical application to the nipples. It has been used orally in infants with thrush, sometimes successfully after nystatin has failed.[1] Any excess cream or ointment should be removed from the nipples before nursing. Only water-miscible cream or gel products should be applied to the breast because ointments may expose the infant to high levels of mineral paraffins via licking.[2]
