

## Elapegademase

Revised: November 15, 2023.

CASRN: 1709806-75-6

## Drug Levels and Effects

### Summary of Use during Lactation

No information is available on the use of elapegademase during breastfeeding. Because elapegademase is a large protein molecule with a molecular weight of about 113,000 Da, the amount in milk is likely to be very low.[1] It is also likely to be partially destroyed in the infant's gastrointestinal tract and absorption by the infant is probably minimal.[2] If elapegademase is required by the mother, it is not a reason to discontinue breastfeeding. Until more data are available, elapegademase should be used with careful monitoring during breastfeeding. Waiting for at least 2 weeks postpartum to resume therapy may minimize transfer to the infant.[3]

### Drug Levels

*Maternal Levels.* Relevant published information was not found as of the revision date.

*Infant Levels.* Relevant published information was not found as of the revision date.

### Effects in Breastfed Infants

Relevant published information was not found as of the revision date.

### Effects on Lactation and Breastmilk

Relevant published information was not found as of the revision date.

## Substance Identification

### Substance Name

Elapegademase

### CAS Registry Number

1709806-75-6

### Drug Class

Breast Feeding

Lactation

Milk, Human

Enzymes

Enzyme Replacement Therapy

Adenosine Deaminase Inhibitors
