Appendix Table 5. Comparison of Patient Characteristics of Children Who Did and Did Not Complete the 14-20 Day Interview

|  | Number (\%) |  |  |  |
| :--- | ---: | ---: | ---: | :--- |
|  | Completed both <br> interviews <br> $n=2096$ | Missed day 14 <br> interview <br> $n=376$ |  |  |
| Characteristic | 4.9 | $(3.5)$ | 5.1 | $(3.7)$ |
| Age yrs, mean (standard deviation) | 1086 | $(52)$ | 189 | $(50)$ |
| Male |  |  |  |  |
| Race | 1200 | $(57)$ | 237 | $(63)$ |
| $\quad$ White | 567 | $(27)$ | 69 | $(18)$ |
| $\quad$ Black | 48 | $(2)$ | 18 | $(5)$ |
| $\quad$ Asian | 28 | $(1)$ | 10 | $(3)$ |
| $\quad$ Other | 253 | $(12)$ | 42 | $(11)$ |
| $\quad$ Unknown |  |  |  |  |
|  | 1988 | $(95)$ | 356 | $(95)$ |
| Latino | 107 | $(5)$ | 18 | $(5)$ |
| $\quad$ Yes | 1 | $(0)$ | 2 | $(1)$ |
| $\quad$ No |  |  |  | 91 |
| $\quad$ Unknown | 709 | $(34)$ | $(24)$ |  |
| Public insurance | 681 | $(32)$ | 96 | $(26)$ |

Note: Race and ethnicity were obtained exclusively from the EHR; in the final cohort, race/ethnicity was derived from both the day 14-20 interview and the EHR.
